

Sync Project — AI Token & Cost Estimate

Estimated tokens and money spent to build this full-stack NestJS + React workspace with AI coding assistance. Based on repository size, git churn, and typical Cursor/Claude usage patterns.

Codebase scope

12.0k Lines of source code	390 KB Total text size
131 Tracked files	20 Git commits
~40 Days of development	42.8k Total insertions (git)
~745 Total deletions (git)	~3.5x Churn ratio

Breakdown by area

Area	Files	Lines	Chars	Approx. final tokens
Backend (NestJS, apps/backend/src)	~60	5,637	165,981	~46k
Frontend (React, apps/frontend/src)	~35	5,941	203,198	~57k
Shared package (packages/shared)	~8	179	5,741	~1.6k
Configs (JSON / YAML / env / Dockerfile)	~20	~728	~24,031	~7k
README & docs (Markdown)	~5	~500	~17,800	~4k
Total (final repo state)	131	~12,985	~416,000	~115k

Tokens estimated at ~3.6 characters/token (typical for TypeScript + English comments). Final repo state only — does not include intermediate drafts.

Token estimation method

1. Final output tokens

The final repository contains ~390KB of source text, which converts to roughly **~110k tokens** at 3.6 chars/token.

This is only what you can see in the repo today.

2. AI-session overhead multiplier

Real AI coding burns 30–200× the final output in tokens: file re-reads, tool-call payloads, system prompts, exploration, failed attempts, and re-writes.

Git churn here is ~3.5× (42.8k insertions for ~12k final lines), suggesting moderate iteration.

Implied overhead per scenario

Scenario	Total tokens	× final output	Input / Output split
Conservative	4.0M	36×	80% / 20%
Typical	10.0M	91×	80% / 20%
Heavy	22.0M	200×	78% / 22%

Cost by scenario

Scenario A		Conservative
Total tokens		
4.0M		
Pricing assumed		
\$3/M in · \$15/M out		
Cost (USD)		
\$21.60		
Cost (VND @ 25,800)		
557,280 đ		
Efficient prompting, few rewrites, mostly Sonnet-class		
Scenario B		Typical
Total tokens		
10.0M		
Pricing assumed		
\$3/M in · \$15/M out		
Cost (USD)		
\$54.00		
Cost (VND @ 25,800)		
1,393,200 đ		
Normal Cursor/Claude flow with iterations & debugging		
Scenario C		Heavy
Total tokens		
22.0M		
Pricing assumed		
\$4/M in · \$18/M out		
Cost (USD)		
\$155.76		
Cost (VND @ 25,800)		
4,018,608 đ		
Lots of refactors, Opus-mix on hard problems		

Detailed cost table

Scenario	Input tokens	Output tokens	USD input	USD output	Total USD	Total VND
Conservative	3.20M	0.80M	\$9.60	\$12.00	\$21.60	557,280 đ
Typical	8.00M	2.00M	\$24.00	\$30.00	\$54.00	1,393,200 đ
Heavy	17.16M	4.84M	\$68.64	\$87.12	\$155.76	4,018,608 đ

Cost visualization

Stacked USD cost per scenario. Bar widths are proportional to the Heavy scenario total (\$155.76 = 100%).

Alternative: Cursor subscription baseline

Cursor Pro (\$20/mo)	\$26.00 · 670,800 đ ~1.3 months of work. Best case if everything fits in the included quota — heavy weeks will overflow into usage-based pricing.
Cursor Ultra (\$200/mo)	\$260.00 · 6,708,000 đ ~1.3 months on the higher-tier plan. Includes much more generous frontier-model quota; overage rare for this scope.
Pure pay-as-you-go API	\$54.00 · 1,393,200 đ Typical-scenario estimate, no subscription. Most accurate lower bound for true compute cost.

Bottom line

Most likely range

Building this project with modern AI coding assistance most likely consumed **~8–12 million tokens** and cost roughly **\$54.00 ($\approx 1,393,200$ đ)** on pure API pricing, or about **\$26.00 ($\approx 670,800$ đ)** if absorbed entirely inside a Cursor Pro subscription. Realistic full range is **\$21.60 – \$155.76 ($\approx 557k$ – $4.0M$ đ)** depending on how often Opus-class models and heavy iteration were used.

Assumptions & caveats

- Token count is inferred from final repo size + git churn — the real AI session traffic is not logged in this workspace.
- Pricing uses Claude Sonnet 4-class rates (\$3/M in, \$15/M out). GPT-5 / Gemini would be 30–60% cheaper; pure Opus 4 would be ~5× more expensive.
- Exchange rate assumed: 1 USD = 25,800 VND (mid-2026 estimate). Use your bank's spot rate for exact VND.
- Does not include human review time, infrastructure, or any non-AI tooling cost.
